

New Columns

Designs of Distinctions Column Collection adds two new styles and increases the functionality of the most popular island support post. New to the line are the 6" Arts & Crafts Column and Pilaster and the 3.5" Wright Column and Wright Column with Detachable Foot.

Our Arts & Crafts Column is a stately design that works beautifully with today's simple shaker style cabinetry while the Wright Column features elegant lines that highlight the grain of the wood while not overwhelming a space. Both Wright Columns are trimmable so they can be used at either dining table or island height.

If you are looking for ease of installation and functionality, our Wright Column with Foot, and Hollow square posts are the perfect fit. It's easy to create a shelf extension at the end of an island or peninsula with the two-piece Wright Column. The detachable foot features a $\frac{3}{4}$ " tenon which fits perfectly into the hole at the bottom of the column shaft. Simply drill a hole in your shelving, place the foot beneath, the shaft above, and VOILA! created a beautiful island extension with shelving.

Electrical requirements in kitchen islands can be interfere with designs and frequently look out of place. Our new hollow 3" and 6" square posts allow you to run electrical, plumbing or additional support through the center while maintaining a sleek contemporary look.
